### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for Allowance:

The prior arts of record teach a fault isolation controller responsive to the faulty condition, the fault isolation controller responsive to the faulty condition identifies the device causing the faulty condition. The fault isolation controller is used to test each device by writing and reading its configuration space. The faulty device is identified if the bus hang condition occurs when that device is tested. A watcher is used that includes a storage device for storing information on the bus associated with the faulty condition. Goodrum et al., (U.S. Patent number 6,032,271) is one such example of prior art. The prior art of record, however, fails to teach, singly or in combination sending out the address, the command, a frame signal and a ready signal in the next bus cycle after a PCI arbiter responds a acknowledge signal and decodes the address and command through a target device and sends out a device selection signal from the target device. The subject matter sought to be patented as recited in the claims in this application has practical applications in the field of diagnostic equipment, testers and analyzers.

Any comments considered necessary by Applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee, Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
